# INTRODUCTION

For this assignment, we have been assigned to develop a web-based e-commerce platform using PHP and MySQL. The project aims to create a simple, user-friendly platform where administrators can create new products for each category, and customers be able to access the system, can save the products at cart, history of purchases. The project scopes are given as follows;

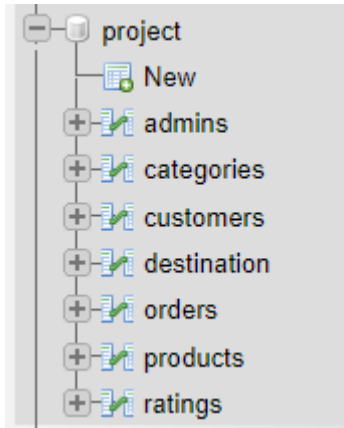

1. Create a database schema using MySQL, including tables for admins, customers, products, and carts. (Depends on your system)
2. Implement a customer registration and login system for both admin and customer.
3. Implement admin be able to create new product items, editable (update, delete) for admin and display at the customer page.
4. Implement admin be able to see records how many sales for today/month.
5. Implement admin to be able to see list of customers.
6. Implement customers can search a product, make purchases for products, choose destinations, payment type and be able to add to cart.
7. Implement customers can edit their profile and see their purchases history.
8. Implement customers can rate the products.
9. Ensure the application is secure by implementing proper input validation and protection against common web vulnerabilities.

We decided to develop a **clothes retail** e-commerce system named **OUR STORE**. Our Store sells clothes and footwears to customers. It is a user-friendly site that is easy to understand from all age levels. We have included bunch of helpful features to ease both customers and admins. Such features are for customers register new account, to find desired products, to add item into cart, to rate the products and see other's rating, to see past purchases, to add and choose among destinations, to edit profile, and much more. While for admins, there would be dashboard for admin to see and monitor the number of data, then to view/add/update/delete products, categories, admins, users. Also to monitor order status and sales made.

OUR STORE is fully built by using HTML, CSS, JS for frontend with backend PHP language. This project can be said the biggest project yet we have created.

# DATABASE

Lets first look into the database created for the website

The name of the database is 'project', consisting of 9 different tables.

## Structures:

### Table admins

	#	Name	Type	Collation	Attributes	Null	Default	Comments	Extra
<input type="checkbox"/>	1	<b>admin_id</b>	int(11)			No	None		AUTO_INCREMENT
<input type="checkbox"/>	2	<b>email</b>	varchar(255)	utf8mb4_general_ci		No	None		
<input type="checkbox"/>	3	<b>password</b>	varchar(255)	utf8mb4_general_ci		No	None		
<input type="checkbox"/>	4	<b>fullname</b>	varchar(191)	utf8mb4_general_ci		Yes	NULL		
<input type="checkbox"/>	5	<b>created_at</b>	datetime			No	current_timestamp()		

### Table customers

Name	Type	Collation	Attributes	Null	Default	Comments	Extra
<b>cust_id</b>	int(11)			No	None		AUTO_INCREMENT
<b>email</b>	varchar(30)	utf8mb4_general_ci		No	None		
<b>password</b>	varchar(30)	utf8mb4_general_ci		No	None		
<b>fullname</b>	varchar(191)	utf8mb4_general_ci		No	None		
<b>created_at</b>	datetime			No	current_timestamp()		

## Table categories

Name	Type	Collation	Attributes	Null	Default	Comments	Extra
<b>category_id</b> 🔑	int(11)			No	None		AUTO_INCREMENT
<b>name</b>	varchar(191)	utf8mb4_general_ci		No	None		
<b>description</b>	text	utf8mb4_general_ci		No	None		
<b>created_at</b>	datetime			No	current_timestamp()		

## Table orders

Name	Type	Collation	Attributes	Null	Default	Comments	Extra
<b>order_id</b> 🔑	int(11)			No	None		AUTO_INCREMENT
<b>cust_id</b> 🔑	int(11)			No	None		
<b>grand_total</b>	float(10,2)			No	None		
<b>created_at</b>	datetime			No	current_timestamp()		
<b>status</b>	enum('Pending', 'Completed', 'Cancelled')	utf8_unicode_ci		No	Pending		
<b>product_id</b> 🔑	int(11)			Yes	NULL		

## Table products

Name	Type	Collation	Attributes	Null	Default	Comments	Extra
<b>product_id</b> 🔑	int(11)			No	<i>None</i>		AUTO_INCREMENT
<b>category_id</b> 🔑	int(11)			Yes	<i>NULL</i>		
<b>name</b>	varchar(255)	utf8mb4_general_ci		No	<i>None</i>		
<b>description</b>	text	utf8mb4_general_ci		Yes	<i>NULL</i>		
<b>price</b>	decimal(10,2)			No	<i>None</i>		
<b>image</b>	varchar(255)	utf8mb4_general_ci		No	<i>None</i>		
<b>created_at</b>	datetime			No	current_timestamp()		

## Table destinations

Name	Type	Collation	Attributes	Null	Default	Comments	Extra
<b>destination_id</b> 🔑	int(11)			No	<i>None</i>		AUTO_INCREMENT
<b>cust_id</b> 🔑	int(11)			Yes	<i>NULL</i>		
<b>location</b>	varchar(191)	utf8mb4_general_ci		No	<i>None</i>		
<b>address</b>	text	utf8mb4_general_ci		No	<i>None</i>		

## Table ratings

Name	Type	Collation	Attributes	Null	Default	Comments	Extra
<b>rating_id</b> 🔑	int(11)			No	<i>None</i>		AUTO_INCREMENT
<b>product_id</b> 🔑	int(11)			Yes	<i>NULL</i>		
<b>cust_id</b> 🔑	int(11)			Yes	<i>NULL</i>		
<b>rating</b>	int(11)			Yes	<i>NULL</i>		
<b>review</b>	text	utf8mb4_general_ci		Yes	<i>NULL</i>		
<b>created_at</b>	datetime			Yes	<i>NULL</i>

## Login page

The screenshot shows a web page layout. At the top, there is a header bar with a logo on the left that says "OUR STORE" and navigation links on the right: "Store", "Login", and "Register". Below the header, the main content area features a "Login" form. The form has a title "Login" and two input fields: "Email Id" with the placeholder text "Enter Email Address" and "Password" with the placeholder text "Enter Password". A blue "Login Now" button is positioned below the password field.

## Validation message in login

This screenshot displays the login form with two validation messages shown as yellow toast notifications. The first message, "?! Invalid Email or Password", is positioned above the form. The second message, "?! Logged Out Successfully", is positioned to the left of the form. The login form itself is visible in the background, showing the "Email Id" and "Password" fields and the "Login Now" button.

Store page contains welcoming message, featured products (fetched from products table), and recently added (fetched from last added products on products table). The design is simple as to make it easy to understand and to use among different age levels. Button explore now shall redirect customers to products.php

Header/navbar ↓

functional navbar with working href link home (to home.php), products (to products.php), profile (profile.php, the name is fetched from current customer's name), logout, and cart (to cart.php).

Footer ↓

Just a basic footer for average website, we pull this off from google as to we have no idea how to do the footer. Note that none of the elements in the footer is unclickable.

## Authenticator (include('authentication.php'))

This website offers authentication so that customers cannot access a restricted files such as admin/index.php. Admin's ID is all upto 30001 and above. So that if any id's lower than 30000 trying to get in into any of admin's file will be redirected back to their profile.php

```
<?php
session_start();
include('../config/dbcon.php');

// If user are not authenticated, redirect user to index.php
if(!isset($_SESSION['auth'])){
    $_SESSION['message'] = "Login to Access Dashboard";
    header("Location: ../index/login.php");
    exit(0);
}
else
{
    if($_SESSION['auth_user']['user_id'] <= '29999')
    {
        $_SESSION['message'] = "You are not Authorised Admin";
        header("Location: ../customer/profile.php");
        exit(0);
    }
}

?>
```

?! You are not Authorised Admin

    $review = $_POST['review'];
    $cust_id = $_SESSION['auth_user']['user_id'];

    $insert_rating_query = "INSERT INTO ratings (product_id, cust_id, rating, review) VALUES ($product_id, $cust_id, $rating, $review)";
    $insert_rating_result = mysqli_query($con, $insert_rating_query);
}
```

crud.php file is where all the process of **C**REATE, **R**EAD, **U**PGRADE, and **D**ELETE button function occur. This file existed in both admin and customer folder.

# FILE DIRECTORIES

THANK YOU

This project was the heaviest, most interesting, and a fun opportunity for us.
